## Electronics Engineer – Defence – DV Clearance

### Description

We are currently looking for an experienced Electronics Engineer to join a multidisciplinary team of engineers who help with the development of brand-new technologies for the Defence sector, with a focus on defence over offence.

These technologies can range between communications, cyber security, sensors, detection, and other complex technologies within the Defence sector. As you will be working on defence projects, you will need to be able to obtain (or already hold) DV Security Clearance.

As a smaller defence company, there is more flexibility in the projects you get to work on. Collaboration with other teams and external groups means that you'll get to develop your skills and continually learn new things while inventing exciting technologies.

If you already work in the Defence sector, this would be ideal. However, we are more than happy to consider candidates from other sectors.

With the growth of this company, future career development will be available for those who want to advance their careers. As the company is looking for a few people for this team, we are also open to those who want to focus on doing the job while maintaining an interest in new technologies and fields.

It is expected that you hold a degree in an electronics engineering field that has led you into an electronics engineering career.

Due to the varied nature of this role, I expect a lot of interest from people who want to continue developing their skills while finding the work interesting. If you are interested in this role, I suggest making an application now to avoid missing out.

If you want to work on complex, industry-defining technologies while being paid an excellent starting salary, with salary reviews, bonuses, a pension, free lunches, and other excellent benefits, I'd suggest making an application now to avoid missing out.

For more information, please feel free to call Andrew Welsh, Director of Medical Devices, Biotech and Drug Delivery recruitment specialists, Newton Colmore, on +44 121 268 2240 or submit an application, and a member of our team at Newton Colmore will be in touch with you.
