Embedded Software Engineer – Embedded C

Description

A cutting-edge medical devices companies with a R&D facility in Cambridgeshire are currently looking for experienced Embedded Engineers to work on the hardware and software R&D and invention of brand new medical technologies.

You will be working onsite developing hardware and embedded software systems. You will be mainly working in Embedded C and Assembler while helping with the invention of new devices.

To have the skills required for this role it is expected that you would have worked within the medical devices sector on the development of medical devices. We ideally want you to have worked on a number of successful medical technologies, as an Embedded Software Engineer, in the past but are open to other fields of complex technologies like wireless, diagnostics and oil & Gas systems.

If successful in this role you will be situated in a career that will continue to grow along with the business, so hopefully you will be career minded. You will also have an excellent starting salary and benefits package.

As we are looking for a range of people we are accepting applications from graduates through to senior embedded engineers. If you are a recent graduate we would expect you to hold a 1st or 2nd higher from a leading university, ideally with a placement in industry.

For more information please feel free to call Andrew Welsh, Director of Medical Devices recruitment specialists Newton Colmore, on 0121 268 2240 or make an application and one of our team at Newton Colmore will contact you.

If you are looking for other roles embedded software roles across Europe and the UK we are also recruiting for a number of other companies so still make an application.

Newton Colmore is a specialist recruitment company within the Medical Devices, Scientific Engineering, Science, Electronics Design, New Product Design, Human Factors, Regulatory Affairs, Quality Assurance and Field Service Engineering sectors.
