Medical Devices Electronics Engineer – Circuits Design – Embedded Software

Description

A growing Medical Devices company, based in Cambridge, is currently looking for an experienced Electronics Engineer to assist with the circuit design of a range of brand-new Medical Devices that will contribute to life-saving and life-improving technologies.

Due to the growth in workload across the business, they need a couple of people in this role. The company is hoping to introduce skillsets to the business that they currently don't possess. Consequently, it would be highly advantageous if you have experience as an Electronics Engineer who has worked on PCB design, circuit design, embedded software, or firmware engineering.

The types of Medical Devices you will be working on will change regularly. Therefore, it would be beneficial if you have experience working on a variety of projects throughout your career. Although experience with Medical Devices would be useful, we are open to candidates with experience in other highly regulated sectors.

The invention and improvement of Medical Devices are the core focus of this company, meaning you will always be working on the cutting edge of the sector, continuously learning new things.

In addition to having some industry experience, it is expected that you hold a degree in an electronics-related field or another field that has led you into an electronics engineering role.

This is a great company for advancing your career due to working on complex products and continued skills/industry training. Apart from this you will be rewarded with an excellent starting salary, bonuses, enhanced pension, higher than normal holiday allowance and other excellent benefits.

I anticipate a lot of interest in this role, so if you are interested, I suggest submitting your application now to avoid missing out.

For more general information, please feel free to call Andrew Welsh, Director of Medical Devices recruitment and Scientific recruitment specialists Newton Colmore, on 0121 268 2240 or make an application and one of our team at Newton Colmore Consulting will contact you. Please note we will not be able to discuss the role specifics until we have a copy of your CV.
