## Medical Devices Project Leader

### Description

We're looking for a driven and technically credible Project Leader to take a leading role in our Warwick based medical devices team. This is a chance to shape genuinely impactful technologies guiding ambitious development programmes that move from early concept through to full commercial launch, improving patient outcomes along the way.

You'll be central to a fast-moving, multidisciplinary environment, bringing structure, clarity and momentum to complex engineering challenges. Your experience leading projects within medical technology will be essential, particularly where products are designed for high-volume manufacture. A strong understanding of injection-moulded plastic components is a must, and any exposure to regulatory pathways or full lifecycle development will help you hit the ground running.

We're looking for someone with a solid academic foundation in a discipline that naturally feeds into medical device design — mechanical engineering, electronics engineering, biomedical engineering or something closely aligned. Your technical grounding will allow you to engage confidently with design teams, challenge thinking where needed, and help steer the creation of robust, compliant and innovative products.

You'll also play a key role in developing others. Mentoring junior engineers, sharing knowledge and helping shape their technical and professional growth will be an important part of your remit. We value leaders who build trust, lead by example and create an environment where people feel supported to do their best work.

What really sets you apart is your mindset. We're drawn to people who are naturally curious — the kind who enjoy solving problems for the sake of it. If you have a technical hobby or side project that shows your passion for engineering or technology, that's a real advantage. It tells us you think creatively, explore ideas and enjoy understanding how things work.

In return, you'll receive an excellent starting salary, a strong pension scheme, performance-related bonuses and ongoing opportunities for professional development. This is a role where your progression is taken seriously and your contributions are recognised.

For more information, please contact Andrew Welsh, Director of Medical Devices, Biotech and Drug Discovery Recruitment at Newton Colmore, on +44 121 268 2240. Alternatively, submit your application and a member of our team will be in touch. Please note that without a CV, we can only provide limited information.

### Hiring organization

Newton Colmore Consulting Ltd

### Employment Type

Full-time

### Industry

Medical Devices

### Job Location

Warwick, Warwickshire

### Date posted

23rd June 2026

### Valid through

30.09.2026
